

ELECTROPHYSIOLOGY POSITIONING CATHETER

INVENTORS: THOMAS D. WELDON
CHARLES E. LARSEN
JONATHAN J. ROSEN

ABSTRACT OF THE DISCLOSURE

Methods and apparatus are disclosed for treating body tissue whereby a section of tissue is drawn into contact with the open distal end of the first passageway of the apparatus. A tissue treatment fluid is introduced into the second passageway for treating the desired section of tissue retained within the first passageway. Methods and apparatus are also disclosed for positioning a medical device at a desired location within the heart. A portion of the apparatus is retained at a desired location of the heart and a medical device is extended through a passageway of the apparatus for contacting the heart at the desired location.
